TOP SECRET

NPIC/R-5140/64

This report supplements NPIC/R-244/63, 1/ which discusses the Gusev MRBM Complex, previously consisting of two Type I launch areas.

Gusev MRBM Launch Areas No 1 and 2 were first observed [redacted] however, their status could not be determined at that time because of partial cloud cover over each site. They were considered to be complete [redacted]

[redacted] Launch Area No 1 is 21.0 nautical miles (nm) north-northwest of the fixed field site and Launch Area No 2 is 23.8 nm north-northwest of the site. They are both connected to the fixed field site by road.

The fixed field site (Figure 1) is located in a rolling, wooded area 14.0 nm south-southeast of Gusev and 1.6 nm north of the border of Poland. It was not present on photography [redacted]

[redacted] and was first observed [redacted] At that time the site consisted of two clearings

and three launch positions interconnected by a road network (Figure 2). Later [redacted]

[redacted] photography revealed another launch position had been added. The azimuth of the launch positions is approximately 220 degrees, compared with azimuths of approximately 250 degrees for Launch Areas No 1 and 2. Photography [redacted]

[redacted] revealed no further change in the site. There were no vehicles or equipment discernible at this fixed field site on any of the referenced photographic missions.

Gusev MRBM Launch Areas No 1 and 2 probably use the rail yards in Gusev for a rail-to-road transfer point. A rail spur 1.6 nm northeast of the fixed field site could serve as its rail-to-road transfer point. Good roads connect the transfer points with the site.
